### REASONS FOR ALLOWANCE

1. Claims 18, 24-27, and 72-94 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claim 18 and 72 recite a glass powder batch comprising substantially spherical lead borosilicate glass particles having a weight average particle size of not more than 10 microns, a particle density of at least 95% of the theoretical density, and wherein 80 weight % of the particles are not larger than twice the average particle size or the glass particles comprise no more than about 0.1 atomic percent impurities.

Independent claim 82 recites a glass batch composition comprising substantially spherical composite glass particles having a first glass phase and a second crystalline phase having a weight average particle size of not more than 10 microns, a particle density of at least 95% of the theoretical density, and wherein the composite glass particles comprise no more than about 0.1 atomic percent impurities.

The closest prior art fails to teach or render obvious substantially spherical lead borosilicate glass particles having a weight average particle size of not more than 10 microns wherein 80 weight % of the particles are not larger than twice the average particle size or the glass particles comprise no more than about 0.1 atomic percent impurities or composite glass particles having a first glass phase and a second crystalline phase having a weight average particle size of not more than 10 microns
